Transaction Summary

The transaction is a securitisation of auto loan receivables originated in England, Wales and Scotland. The seller, Volkswagen Financial Services (UK) Ltd., is a wholly owned subsidiary of VW Finance Overseas BV, in turn wholly owned by Volkswagen Financial Services AG, and ultimately by Volkswagen AG. The transaction includes personal contract purchase (PCP) and hire purchase (HP) loans.

The revolving period, originally set to end in March 2021, has been extended until June 2022.

KEY RATING DRIVERS

Increased Used-Car Price Exposure

PCP and HP loans regulated by the Consumer Credit Act provide obligors with voluntary termination (VT) rights, allowing them to return the vehicle before maturity. PCP loans provide the option of returning the vehicle at maturity instead of paying the balloon amount. The issuer is exposed to the risk of declines in used-car prices, as proceeds from the sale of returned vehicles may be lower than the outstanding loan balance. Fitch assumed a total residual value (RV) and VT loss of 24.2% at 'AAAsf', increased from 20.9% at closing. This is mainly due to the higher RV share in the portfolio as a consequence of its increased seasoning, and also reflects the extended revolving period. The transaction does not envisage covenants on the exposure to RV.

Asset Assumptions Maintained, Coronavirus Impact

Observed defaults are low at 0.05%. Fitch has maintained its default and recovery base cases at 1.8% and 60%, respectively, applied to the stressed portfolio assumed by the end of the 15-month revolving period. The base cases reflect our expectations that despite the good performance since closing, losses will increase as government support measures and payment holiday schemes instituted as a response to the economic consequences of the coronavirus pandemic are gradually phased out.

The stressed pool's assumed 'AAAsf' weighted average default multiple is 5.1x and the recovery haircut is 45%, resulting in overall credit losses of 6.1% at 'AAAsf'.

Sensitivity to Pro Rata Period

The transaction features a pro rata amortisation of notes if certain overcollateralisation (OC) conditions are fulfilled and performance triggers are not breached. The length of the pro rata period and therefore outflow of funds to junior positions on the waterfall is driven by the lifetime losses, combined with the default and recovery timing.

Lower losses with back-loaded timing could lead to a later switch back to sequential amortisation and be more detrimental for the notes than higher losses with a front-loaded timing.

Revised OC Levels Credit Positive

The issuer is allowed to tap-up existing series as well as to issue new series of notes, provided that certain OC triggers are respected. These triggers, which only apply to the tap-ups or new issuances,

have been tightened, limiting the potential diluting effect of increasing the transaction's size.
